ALHAJRI: Project MAJHOOL

Official Walkthrough | Beginner CTF | Estimated completion: 30 minutes

About this guide

This official solution guide explains all five challenges in ALHAJRI: Project MAJHOOL. The room introduces beginners to acrostics, Base64 encoding, flag recognition and Caesar ciphers. No virtual machine or VPN connection is required.

Task 1 - The Unknown Identity

Read the seven lines of the mysterious message. Take the first character of each line, from top to bottom.

The initials spell M-A-J-H-O-O-L.

```
Correct answer: MAJHOOL
```

Task 2 - MAJHOOL's Secret

The supplied string is **U0VDUkVU**. Recognise the Base64 format and decode it using CyberChef (From Base64) or another Base64 decoder.

The decoded plaintext is SECRET.

```
Correct answer: SECRET
```

Task 3 - The Hidden Flag

Read the message and look for text matching the stated flag format **ALHAJRI{...}**.

The message contains the complete flag directly: ALHAJRI{FIRST_FLAG}.

```
Correct answer: ALHAJRI{FIRST_FLAG}
```

Task 4 - MAJHOOL's Code

The ciphertext is **GRKD**. The challenge specifies a Caesar shift of 3. To decrypt, move each letter three places backwards in the alphabet.

G becomes D; R becomes O; K becomes H; D becomes A.

```
Correct answer: DOHA
```

Task 5 - The Final Message

The encoded flag is **QUxIQUpSSXtZT1VfRk9VTkRfTUV9**. As in Task 2, decode it using the From Base64 operation in CyberChef.

The resulting string is the final flag.

```
Correct answer: ALHAJRI{YOU_FOUND_ME}
```

Reviewer notes

All five questions are self-contained, require no external infrastructure, and can be verified using the instructions above. This guide contains spoilers and is intended for the room owner and authorised reviewers.
